

# PORTABLE TRAINER LITE™

## MODEL #L360

### Portable, durable, easy to set up

The PRISim Suite® PortableTrainer™ is a judgement evaluation and force options training system, loaded with features to meet your training needs. By design, it creates a safe, effective and realistic learning environment for law enforcement, military and security professionals.

This cost-effective training system is portable, easy to use, quick to deploy and simple to transport. Integrated components allow trainers to set up the PRISim Suite PortableTrainer in as little as 15 minutes.

PRISim Suite PortableTrainer comes with over 360 pre-installed branching situations to meet your training requirements. ***Train to win with PRISim Suite PortableTrainer.***

## KEY FEATURES

- Highly portable, durable and easy to set up.
- Turns virtually any interior room with controlled lighting into an effective training environment.
- Presents consistent training and learning objectives for each trainee.
- Supports a broad range of standard issue firearms and less-lethal devices.
- Supports multiple shooter and multiple laser devices simultaneously.
- Supports all force options.
- Integrated presentation viewer for briefing and debriefing.
- Review and export of training performance.

# MODIFIED WEAPONS FOR SIMULATION

## TRAINING TO WIN

Since 1995, Cubic has been providing custom modified weapons for training simulation, specifically designed to meet the training requirements of our customers. Cubic provides a wide selection of simulator weapons, ranging from dedicated modified firearms to drop-in barrel kits that can be used in the customer's own weapons.

*Less Lethal Options*

## QUALITY ASSURANCE

Each modified weapon starts with an actual or demilitarised weapon, which is then fabricated to prevent the chambering or discharge of live rounds. The modified weapon offers:

- The look, weight and feel of the original weapon.
- Designed for reliability and maintenance.
- Sensors and components manufactured for extended life.

All modified recoil designs undergo stringent quality assurance testing that includes:

- Recoil cycle analysis to confirm reliable operation.
- Functionality checks to ensure the mechanics of the modified weapon replicate the original firearm.

## WEAPON TYPES

**Recoil** - Modified recoil weapons increase the realism of your training experience.

Multiple recoil designs allow you to choose the best fit for your training needs:

- Belt Pack (tethered) - Reliable recoil and unrestricted movement, works with CO<sub>2</sub>
- Magazine (non-tethered, integrated recoil kit) - Simple recoil, quick installation and removal, works with CO<sub>2</sub>

**Dry-Fire** - Design options for modified weapons provide viable training and diagnostic tools for simulation without recoil:

- Dedicated Dry-Fire - Dry-fire barrel and permanently modified weapons, allows for unrestricted movement.
- Drop-In Laser Kits - Laser insert provides added versatility in weapon selection.
